

ALFONSO · DECISION MAKER

PROJECT CHAT · ARCHITECT

CLAUDE CODE · EXECUTOR

feature, bug or gate

At ~60% of context the architect writes the checkpoint: its own section of sessione_CORRENTE.md in the KB (one section per active chat), copy in docs/sessioni/

COSA / DOVE / COME / RIFERIMENTI, hard stops, scope-out list; a fast prompt carries the GO and the measured cause; committed at once in docs/prompts/

prompt on stdin

session started

ID and Status guards pass?

Lane: full?

full

Phase 1: read-only discovery
CLAUDE.md first, then the files the prompt names

Discovery report, committed
docs/discovery/discovery_<date>_<slug>.md

HARD STOP: the session exits
Outcome: hard-stop | question

RC-26 short list waits for Alfonso: critical zone, exported interfaces, amending a ratified R-, deletions, MODELS demo, model/effort/cost, push

critical zone?

no

yes

Phase 2 prompt or GO

message received (same guard)

Baseline gates, numbers stated first
typecheck · vitest · build · check:docs

Tests first, red on the feature
one test per mutant at least

Implement, minimal diff
name check · no rename · declared files only

Mutation bench
applied, run, reverted; table in the commit body

every mutant killed?

Gates on the commit, then commit
git add <files> · Model: trailer · 72-char subject

Log entry + Status flip, written
uncommitted while a visual check is due (RC-17)

the session exits
Outcome: hard-stop (visual check due)

Closure: one docs commit (RC-17)
log entry · Status flip · visual line
